 No, 210/A, Niwandama, Ja-Ela.

PROFILE

I'm a passionate individual in Engineering, driven by innovation and problem-solving. I have completed all academic requirements and am currently awaiting graduation. I'm eager to strengthen my technical expertise, adapt to emerging technologies, and apply creative solutions to real-world engineering challenges, with a strong interest in R&D and contributing to organizational growth.

EDUCATIONAL QUALIFICATIONS

B.Sc. (Hons.) in Science and Technology (Sp. Mechatronics), 2021 – 2025

Uva Wellassa University of Sri Lanka

GPA - 3.40 | Expected Graduation - 2026

G.C.E. Advanced Level 2019

Physical Science - (3 C's)

G.C.E. Ordinary Level 2016

(6 A's including Science & Mathematics, English 'C')

PROFESSIONAL EXPERIENCE

Trainee Electronics Engineer, *CodeGen International (Pvt) Ltd,* Jul 2025 – Dec 2025

Vega Innovations (Power Electronics Department)

Gained hands-on experience in Power Electronics, Embedded Systems, Circuit Simulation, including working with STM32, and TI C2000 micro-controllers, LTspice analysis, PWM/ADC configurations, and understanding flyback converters, gate drivers, and control loops. Worked on multidisciplinary projects involving MCUs, Communication protocols (CAN, RS-485), PCB designing, 3D model design with thermal simulation and simulation tools with power electronics system mainly focusing on fly-back converters with troubleshooting, and testing.

PROJECTS

Soil Sampling Attachment for Autonomous Robot, *Undergraduate Research Project*

Designed and developed an autonomous soil sampling system capable of performing efficient and reliable sampling with minimal human intervention while maintaining sample integrity and operational safety. Integrated an ATmega2560 micro-controller using C++ based embedded programming, stepper motors, servo motors, gear motors, and linear screw actuators to achieve precise motion control. Designed the mechanical structure using SolidWorks and fabricated components through CNC machining, laser cutting, and 3D printing. Developed, tested, and debugged embedded firmware and circuit schematics using Arduino IDE and EasyEDA to ensure system reliability. The project contributes to advancements in autonomous robotic systems for agricultural and environmental monitoring.

Smart Liquid Measuring Machine

Developed an automated liquid filling system using Arduino UNO, solenoid valve, flow sensor, and I2C to accurately dispense preset volumes, reducing labor and minimizing liquid wastage.

Omini-Wheel Robot (Multi directional movement)

Developed a robot using an Omni wheel system, Arduino UNO, Gyroscope, and Bluetooth, enabling precise movement at any angle through coordinated wheel speed and direction control.

PLC Sorted Project

By using PLC (Xinje), a system has been created that can be sorted by height.

TECHNICAL SKILLS

Electronics Simulation Softwares (LTspice, PSIM, MATLAB) | PCB designing | Embedded Systems | SolidWorks | Solid Edge | AutoCAD | System Automation (PLC, Industrial Sensors) | Graphics Designing

SOFT SKILLS

Critical Thinking | Team Work | Proactive and self-motivated | Excellent Communication | Strategic Planning | Adaptability | Willingness to Learn

OTHER QUALIFICATION

- Followed The Certificate Course in English at Cambridge English Academy has achieved Council of Europe Level A1

EXTRA-CURRICULAR ACTIVITIES

- Former Vice Captain of , Volleyball team Uva Wellassa University
- Member of Career Guidance club of Uva Wellassa University

REFEREES

Dr.Chinthaka Amarasinghe,

Senior Lecturer,

Uva Wellassa University.
